Overview

Thanks for your interest in the Web Developer role on Bullhorn's Marketing team. Interviews and portfolios are a great way for us to get a sense of the type of work you're capable of producing. The code challenge, however, allows us to see how you solve specific design/development challenges that you'll likely encounter on a daily basis in this role.

Instructions

This code challenge should take you no more than a few hours to complete. The mockup is very simple and makes use of some pretty standard web layouts and functions.

Use whatever languages you feel most comfortable with to produce a functioning static landing page based on the mockup provided. Feel free to use any frameworks and/or CSS preprocessors to get the job done.

Feel free to use a lorem ipsum generator for all the content. Images can be pulled from pexels.com, lorempixel, or a similar website.

Formatting

If you have a GitHub account and would like to host your static page there, feel free to do so. You can also send a ZIP file with all the necessary resources for us to review locally.
